Rivers & Seas Watch
from Southern Water

Release description:

R&SW 1.0.2 is a support release that stabilises specific areas of the Rivers & Seas Watch IT platform, at the infrastructure level.

The release covers refactoring, that is restructuring the code without changing the functionality originally designed in the platform:

- refactored integrations across the platform to stabilise server issues experienced in July 2024
- refactoring and optimisation of code.

Known Issues

- **Pop-up outfall statuses transitioning too soon –** There are cases where outfall statuses are transitioning on the pop-ups to an amber/72-hour status, when they should show red/24-hour statuses based on the duration since their end date/time. *This only seems to happen when an outfall status is about to transition in status. We are looking into this issue and finding a fix.*

- **.CSV Exports from the release show in US (United States) date format –** When exporting .csv files of the release history table, the .csv file uses US (United States) date format instead of UK date format in the data. *This issue is logged with the ESRI Platform and is dependent on a platform update from ESRI to get the issue fixed.*

- **WCAG accessibility issues –** There are a number of WCAG accessibility issues, such as navigation, screen-reader compatibility and visual impairment accommodation across the mapping interface and release table. *These issues are planned for development over the next few releases.*

- **Landscape mode on mobile –** Sometimes when using landscape mode on the release history screen on a mobile device, a default ESRI map is displayed. *This is a known and logged issue with the ESRI platform – and is dependent on an ESRI platform update for a fix. Users are advised not to use landscape mode on mobile devices until this is resolved.*

- **Investment plan filtering –** missing filter option on the investment plans map.
